

ISO 14644-1 Class 8 Data Centre Cleanliness Compliance Checklist

This checklist helps verify compliance with ISO 14644-1 Class 8 standards for GPU-driven data centres, including NVIDIA AI environments.

Environmental Controls

- ☐ Air cleanliness meets ISO Class 8 particle limits
- ☐ Humidity levels monitored & controlled (typically 40–60%)
- ☐ Temperature maintained within data-centre tolerances
- ☐ Positive airflow maintained to prevent dust ingress
- ☐ HEPA-filtered air handling where required
- ☐ Regular air quality & particle count testing

Surface & Hardware Cleanliness

- ☐ Racks, cabinets & server surfaces free of dust
- ☐ Cable trays and pathways cleaned
- ☐ Top-of-rack and under-rack areas dust-free
- ☐ Raised floor & subfloor regularly cleaned
- ☐ Containment & aisle spaces clean
- ☐ Server fans and vents unobstructed
- ☐ Server fans and vents unobstructed
-

Cleaning Methodology

- ☐ Anti-static HEPA vacuum systems
- ☐ Microfibre and approved wipes only
- ☐ No aerosolised / corrosive agents
- ☐ Documented scheduled deep cleaning
- ☐ Live-environment cleaning supported
- ☐ Trained & certified technicians
- ☐ Dycem or other barrier matting at entrance points

Documentation & Monitoring

- ☐ Cleaning logs maintained
- ☐ Incident reporting in place
- ☐ ISO compliance Certificate/Report retained
- ☐ Particle monitoring data archived
- ☐ Routine inspection schedule
